Ka-Band

MIL-Spec satellite terminals: Manpack, mobile & fixed configurations

Application Ready: SOTM/SOTP, C2, ISR, SOF, Border Control, MWR

THE NEW DIMENSION OF MOBILE SATELLITE COMMUNICATION.

SATCOM ON THE MOVE

- + Platform independent
- + No moving parts
- + Electronic beam steering

RUGGEDIZED VSAT

- + Airline carry-on baggage
- + Stand-alone operation
- + MIL Standard

HIGHLY PORTABLE VSAT

- + BGAN form-size-factor
- + Low weight
- + Easy setup & handling

40 YEARS OF EXCELLENCE IN COMMUNICATION.

Media Broadcast Satellite (MBS), is a communication solutions provider and Germany's largest teleport operator, registered in Germany.

Since the 1970s, Media Broadcast Satellite has provided dedicated services to government and enterprise users via our extensive and fully owned teleport facilities. With up to 135 active antennas and a 24/7 manned network operations center (NOC), Media Broadcast Satellite enables connectivity in government use frequency bands (X-band & MIL Ka-Band) as well as commercial bands (C-, Ku- and Ka-Band) and through its worldwide fiber network. This enables an array of applications such as connectivity for theatres of operation, interconnection and interoperability of institutional or defence sites/network entities, command & control (C2), intelligence, surveillance and reconnaissance (ISR), border control, SOF missions as well as various types of communications-on-the-move/pause for land (SOTM / SOTP), air and maritime missions.

From our Media Broadcast Satellite Teleport in Usingen near Frankfurt, customers can reach regions across Europe, Middle East, Africa, Asia and the American continent with maritime coverage for the Atlantic, Baltic, Mediterranean and Indian Oceans. Dedicated to governmental and institutional users, Media Broadcast Satellite features high-availability, EU/US security compliant and ISO27001 (cyber security) certified infrastructure and services, ranging from military-off-the-shelf services to fully managed and mission tailored communication solutions. Media Broadcast Satellite's open architecture allows the creation of new networks on legacy platforms, taking advantage of deployed and user-trained infrastructure, while optimizing service, parameter-like throughput or availability.

We are proud that our high-quality services are "Made in Usingen/Germany". This quality is reinforced by our own German team of engineers that are dedicated to the support of our customers in all stages of their mission, product and/or service life cycle.
